Common treatment questions

AESTHETICARE[®]
YOUR SKIN PARTNER

“Why is ENDYMED better than any other radiofrequency treatments?”

ENDYMED is the only multi-source, phase controlled radiofrequency device. It's advanced technology, 3DEEP Skin Science, delivers radiofrequency energy deep into the skin in highly-controlled and safe way. The depth of heating is important because we need to heat the area of skin where fibroblasts are - not just the superficial top layers of skin, which many devices do.

As part of ENDYMED TIGHTEN you will also follow a carefully designed home use programme which is packed full of clinically proven products to enhance the results of your ENDYMED treatments!

“Will the treatment hurt?”

No, the specialist technology, 3DEEP Skin Science, means that the intense heat is delivered deep into the dermis while the top layer of skin, the epidermis, remains comfortably warm.

Most find the treatment very relaxing!

“When will I see results?”

No clients' skin is the same, and as such, results and timescales will vary.

You may see an immediate lift after each treatment that will last for a day or two - this is caused by a contraction of your existing collagen.

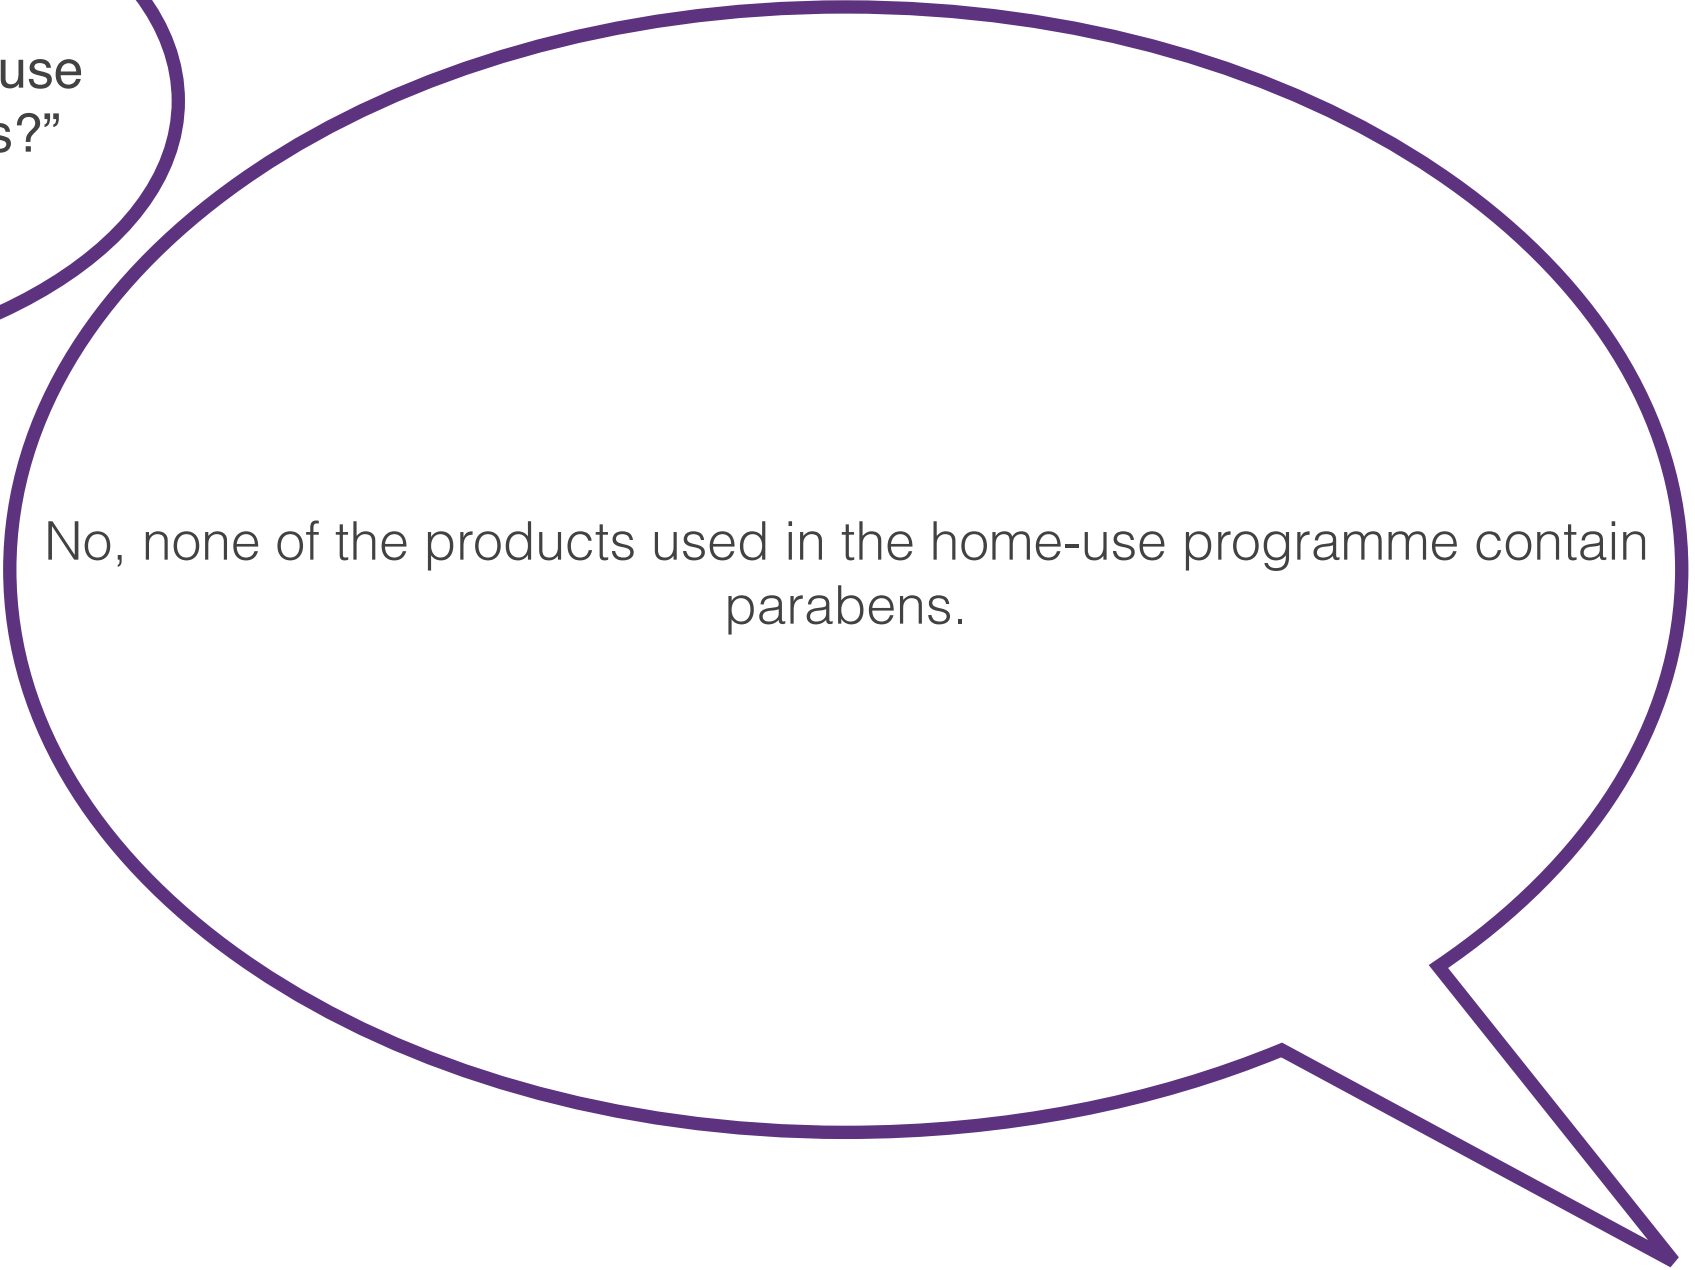

It takes time for new collagen to form, and as such, results won't be immediate. Optimum results will be seen from 3 months onwards after you've finished your treatment course. Don't forget, the results will be natural looking and long-lasting too!

“I’m pregnant, can I have this treatment?”

Unfortunately not, the safety of the unborn child is always paramount, and while there is no evidence that this treatment course could cause harm, we would always recommend caution and not perform the treatment.

“Do the products in the home use programme contain parabens?”

No, none of the products used in the home-use programme contain parabens.

“Will the treatment hurt?”

Before your treatment is started your skin will be numbed with a topical anaesthetic, which will ensure that you remain comfortable throughout your treatment.

“When will I see results?”

No clients' skin is the same, and as such, results and timescales will vary.

As a guide though, from 1-2 weeks after your first treatment you should start to see improvements in skin texture and tone.

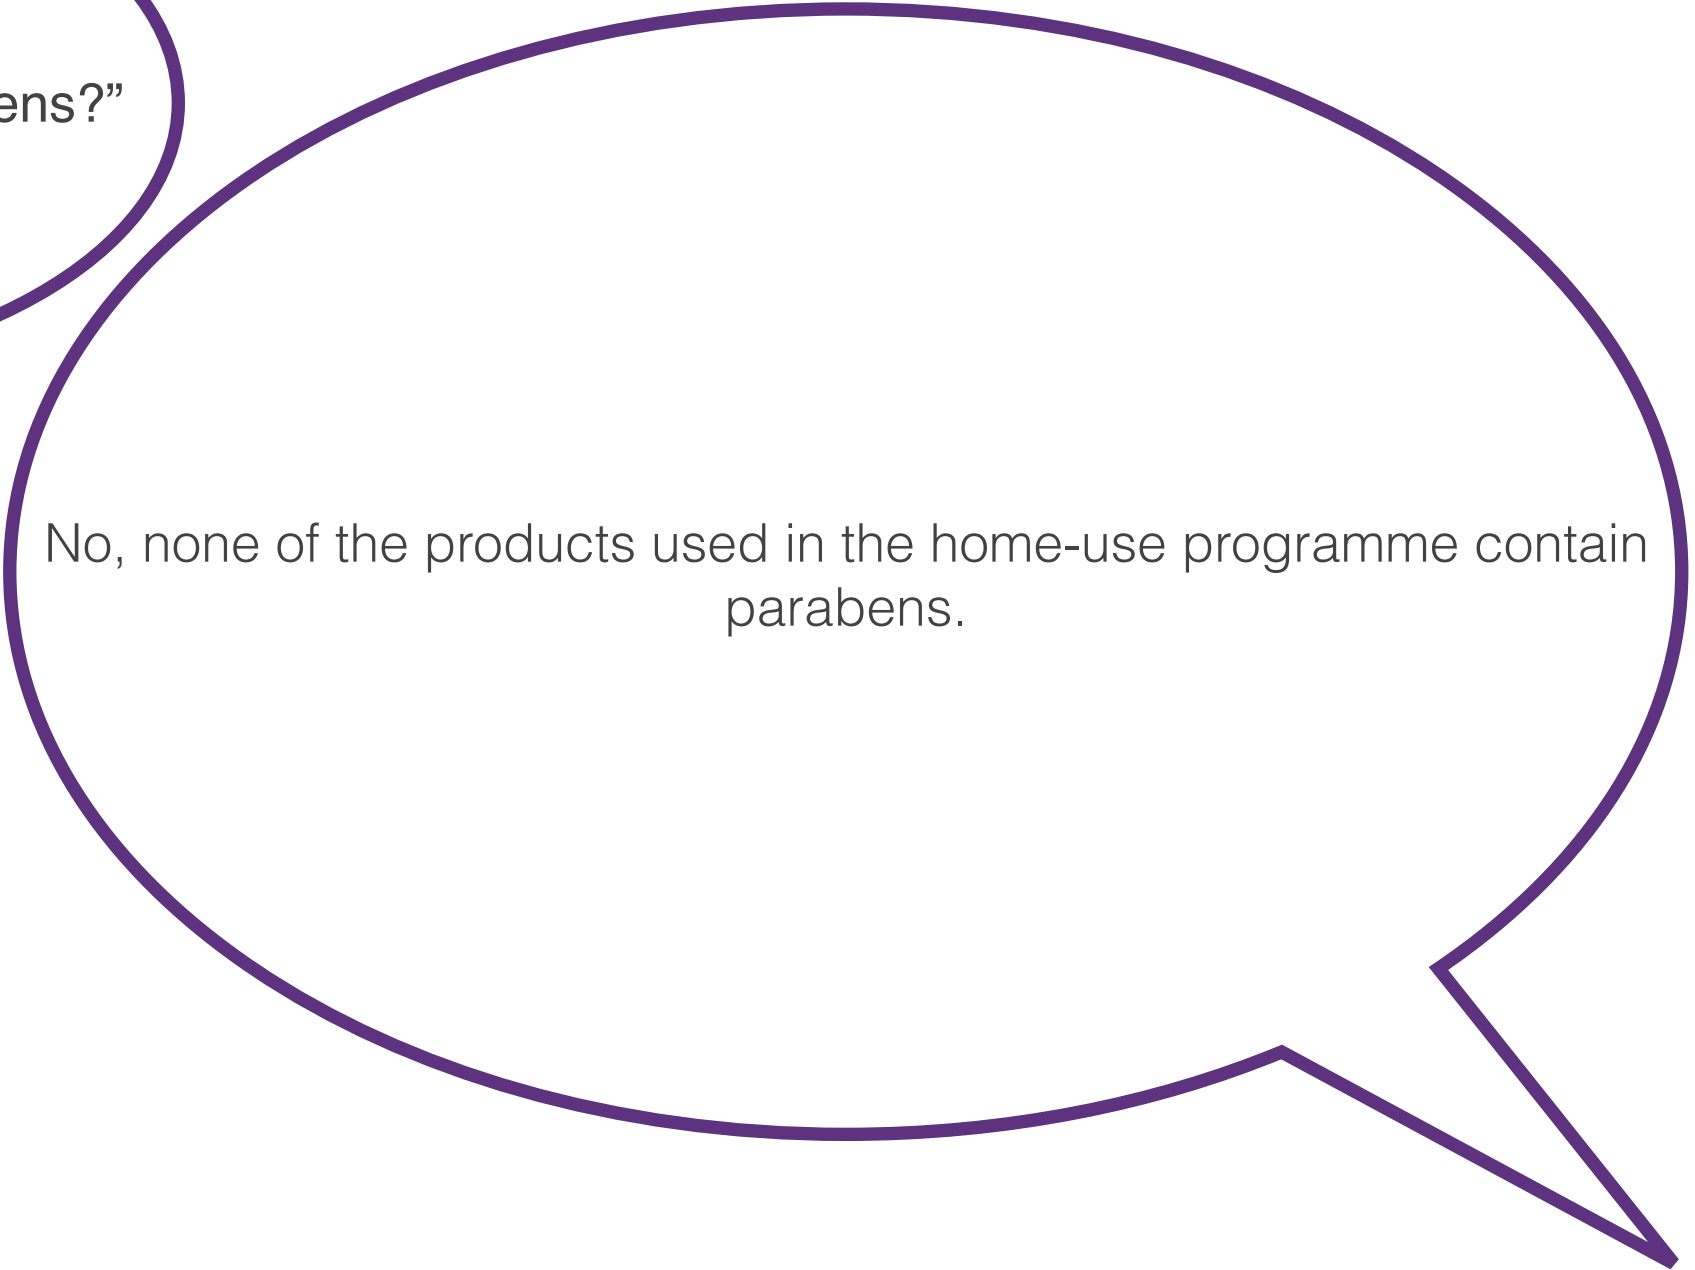

It takes time for new collagen to form, and as such, results won't be immediate. Optimum results will be seen from 3 months onwards after you've finished your treatment course. Don't forget, the results will be natural looking and long-lasting too!

No, none of the products used in the home-use programme contain parabens.

“When will I see results?”

No clients' skin is the same, and as such, results and timescales will vary.

As a guide though, from 1-2 weeks after your first treatment you should start to see improvements in skin luminosity, texture and tone.

It takes time for new collagen to form, and as such, results won't be immediate. Optimum results will be seen from 3 months onwards after you've finished your treatment course. Don't forget, the results will be natural looking and long-lasting too!

“Why will adding V-SHAPE to my treatment give me better results? Won't the other treatment work alone?”

While ENDYMED TIGHTEN and INTENSIF both deliver significant results in skin tightening, ENDYMED V-SHAPE delivers ultra-focused energy even deeper into the skin. This not only stimulates the production of collagen deep in the dermis, but also the upper subcutaneous tissue. This depth of heating gives even more significant results in skin tightening and lifting - giving those stubborn areas, the jawline and chin, a double boost when combined with TIGHTEN or INTENSIF.

“Can I have V-SHAPE all over my face to get the best tightening and lifting results?”

No, ENDYMED V-SHAPE is designed to be used specifically on the jawline and under the chin - where skin is thicker. It's not suitable for use on other areas of the face where skin is thinner as the treatment will too uncomfortable.

“Will the treatment hurt?”

No, the specialist technology, 3DEEP Skin Science, means that the intense heat is delivered deep into the dermis while the top layer of skin, the epidermis, remains comfortably warm.

Unfortunately not, the safety of the unborn child is always paramount, and while there is no evidence that this treatment course could cause harm, we would always recommend caution and not perform the treatment.

“Will the treatment hurt?”

Before your treatment is started your skin will be numbed with a topical anaesthetic, which will ensure that you remain comfortable throughout your treatment.

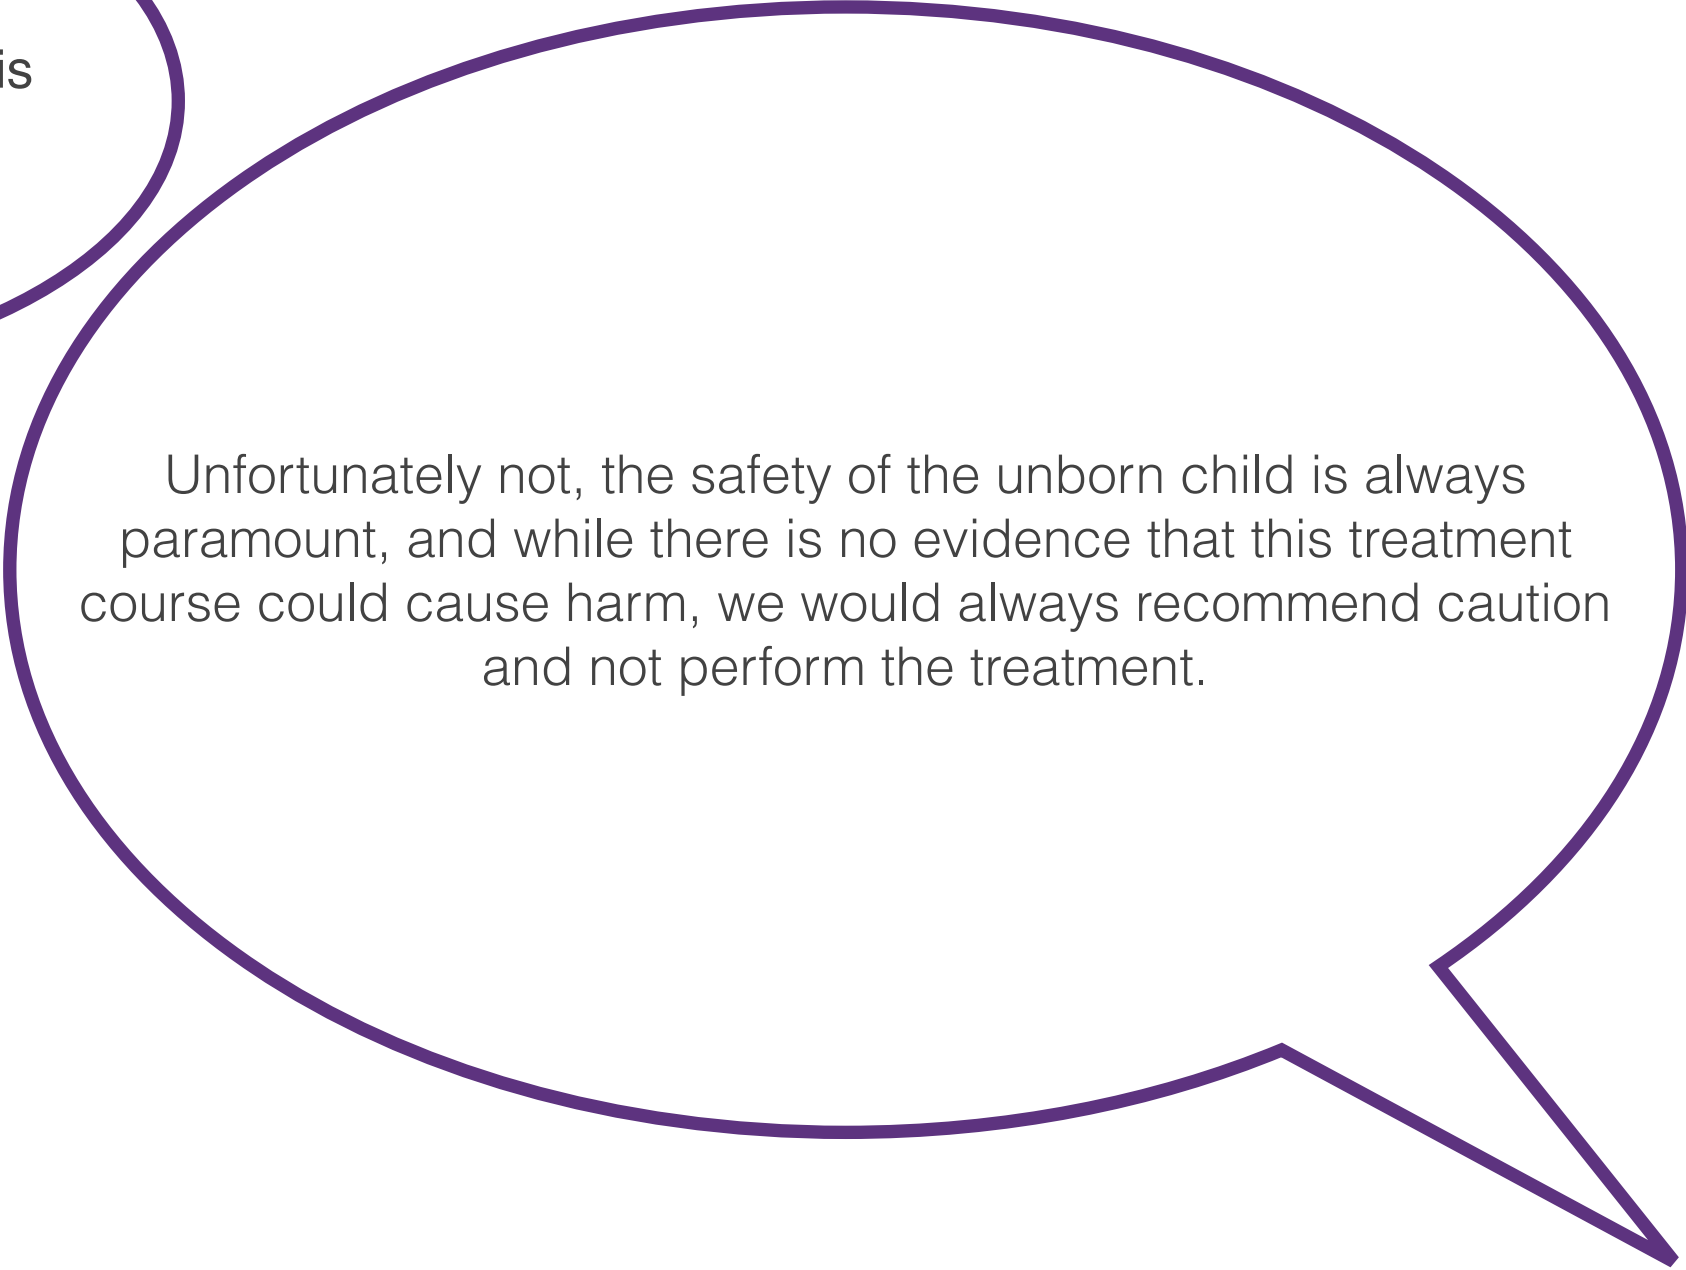

“What will my skin look like afterwards?”

Your skin will look red immediately post-procedure - much like moderate sun burn - but this will resolve within a day.

Your skin may also feel hot after the treatment, but this feeling will stop within 3-4 hours.

“I’m pregnant, can I have this treatment?”

Unfortunately not, the safety of the unborn child is always paramount, and while there is no evidence that this treatment course could cause harm, we would always recommend caution and not perform the treatment.

“Do the products contain parabens?”

No, none of the products used in the home-use programme contain parabens.
